Main purpose for Business is for better quality of life for **ALL** humanity.

What is evil economics?

People are not paid enough to feed, educate and have a minimum quality of life with their families

Exploit the poor

Corruption & Greed

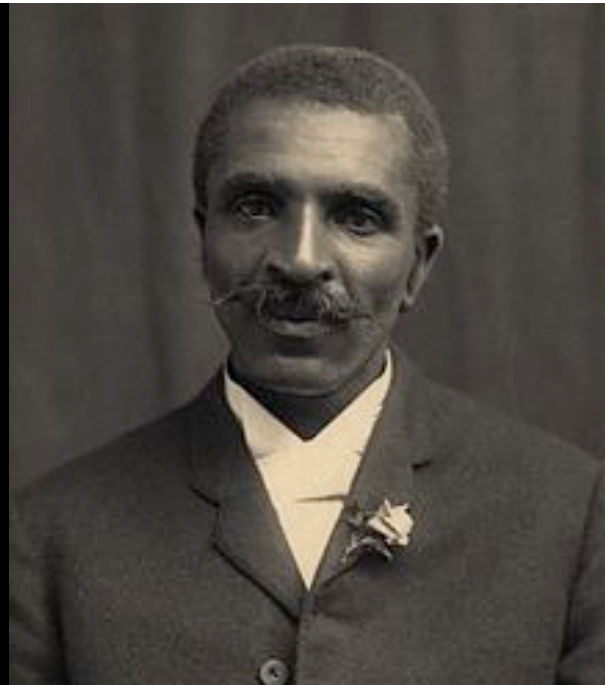

Goods that can save lives but are reserved only for the rich

**martin
shkreli**

**The most
hated man
in America**

His company recently acquired the rights to Daraprim. Developed in the 1950s, the drug is the best treatment for a relatively rare parasitic infection called toxoplasmosis. People with weakened immune systems, such as Aids patients, have come to rely on the drug, which until recently cost about US\$13.50 a **dose**. But Mr Shkreli announced he was raising the price to US \$750 a pill, more than 5,000% increase

George Washington Carver

1860-1943 – 83 yrs

African American Slave who became a scientist
who held over 300 patents for the use of the
peanut alone.

Landa Cope (Old Testament Template)

When asked how he could think of 300 ways to use the peanut, he replied that he held the peanut in his hand and said **“God, You made every seed bearing plant and You said they were good. What did you make the peanut for?”**

Besides peanuts, Carver's research also involved clays, seeds, and sweet potatoes.

Landa Cope (Old Testament Template)

Deuteronomy 23:9-14 (NIV)

⁹ When you are encamped against your enemies, keep away from everything impure. ¹⁰ If one of your men is unclean because of a nocturnal emission, he is to go outside the camp and stay there. ¹¹ But as evening approaches he is to wash himself, and at sunset he may return to the camp. ¹² **Designate a place outside the camp where you can go to relieve yourself.** ¹³ **As part of your equipment have something to dig with, and when you relieve yourself, dig a hole and cover up your excrement.** ¹⁴ **For the Lord your God moves about in your camp to protect you and to deliver your enemies to you. Your camp must be holy, so that he will not see among you anything indecent and turn away from you.**

Consider the background of this passage:

1. Israel was in wilderness and had 2.5 to 3 million Jewish and foreigners.
2. Consider how much manna, quail & water to feed this masses.
3. If you are Moses, how would you solve the Bathroom needs?
4. What if Israel was allowed to defecate anywhere in the camp?

Principles of the passage

1. The community is to take responsibility to make provision for the daily need for all its citizens to urinate and defecate.
2. The citizens were to take personal responsibility to follow those guidelines
3. The waste was to be buried as opposed to put in water or left on the ground.
4. The highest motivation is God's presence who moves amongst them

What does it say about God if He
cares about our hygiene.

What does it say to the society
and nations if the Christians care
about the hygiene in a
community?

2.4 billion people lack basic sanitation: Report

Millions defecate in the open, raising risks of contaminating reservoirs and wells

NEW YORK • Dirty drinking water and open defecation, particularly in rural areas of many developing countries, are threatening to subvert the gains in child survival rates and other health measurements, two major UN agencies said on Tuesday in a joint report on global progress in sanitation.

The report by the World Health Organisation (WHO) and Unicef, the United Nations Children's Fund, said that one in three people worldwide, or 2.4 billion, still live without sanitation facilities.

That includes 946 million people who defecate in the open, raising the risk that reservoirs and wells will be contaminated.

More access to clean drinking water and improved hygiene are among the so-called millennium development goals established by the United Nations in 2000 to help measure improvements in quality of life.

They are to be superseded by "sustainable development goals", a new set of benchmarks to track progress through 2030.

Debates about how to reach the new goals will be a major theme of the upcoming annual gathering of world leaders before the UN General Assembly in September.

The report by the WHO and Unicef noted that access to cleaner drinking water has improved markedly in recent years and that child survival rates have advanced as well. Today, fewer than 1,000 children younger than five die each day from diarrhoea caused by inadequate water, sanitation and hygiene, compared with more than 2,000 children in 2000.

"On the other hand, the progress on sanitation has been hampered by inadequate investments in behaviour change campaigns, lack of affordable products for the poor, and social norms which accept or even encourage open defecation," the report said.

As of today, the report said, only 68 per cent of the world's population uses an improved sanitation facility - 9 percentage points below the millennium development target of 77 per cent. An improved sanitation facility is defined as one that hygienically separates human excrement from human contact.

"Until everyone has access to adequate sanitation facilities, the quality of water supplies will be undermined, and too many people will continue to die from water-borne and water-related diseases,"

Dr Maria Neira, director of the WHO's department of public health, environmental and social determinants of health, said in announcing the report.

To eliminate open defecation by 2030, which is one of the sustainable development goals, the current rates of reduction will have to double, especially in South Asia and sub-Saharan Africa, said the WHO and Unicef in the report.

The report echoed some of the themes in a Unicef report issued on June 22, describing grim trends for the world's poorest children despite gains as measured by the millennium development goals.

Because countries were encouraged to measure improvements through national averages, that report said, many focused on improvements in the easiest-to-reach populations, and not those in the greatest need.

"The global model so far has been that the wealthiest move ahead first, and only when they have access do the poorest start catching up," said Mr Sanjay Wijesekera, head of Unicef's global water, sanitation and hygiene programmes, in a press statement accompanying the report.

"If we are to reach universal access to sanitation by 2030, we need to ensure the poorest start making progress right away."

NEW YORK TIMES

GOOD NEWS AND BAD NEWS

THE GOOD....

Since 1990, there have been huge gains in access to drinking water. Around 2.6 billion people have gained access to an improved drinking water source - one that is protected from outside contamination - and 91 per cent of the global population now use an improved drinking water source, compared with 76 per cent in 1990.

THE BAD...

Progress is much slower in the area of sanitation. One-third of the world's population - 2.4 billion - lack access to an improved sanitation facility that separates human waste from human contact. Nearly one billion people do not use any sanitation facilities and defecate out in the open or in bodies of water. SOURCE: UNESCO
